Release Notes & 2.9 Install Instructions

Wanda ColorPro version 2.9 is now available. With the update, you will find new enhancements to the program including:

- Mixing three-coats colors: the software now allows for the end-user to choose if they want to mix only Layer 1 or only Layer 2 or both

- Option to see the reports in Weight (grams)
- Option to include information of "VOC emission" on the label
- On the paint label, the RTS info is no longer in Portuguese.
- When you work with Automatchic, the Coarseness list now displays 5 and 6 appropriately

New colors available with this release:

- Wanda PU HS – 1,621
- Wanda Waterbase – 13,995
- Wandabase HS – 5,011
 - A detailed list of **new colors** by product line can be found in the Distributor Portal of the Wanda website: <http://wandarefinish.us/wanda-distributors-sign-in/>

To download file:

ColorPro 2.9 (see download link near the bottom): <http://us.my.anaac.net/Support/Downloads>

Included are the Release Notes and Pricing Files.

ColorPro updates are no longer available via a USB; they must be downloaded from the AkzoNobel Customer Service Portal.

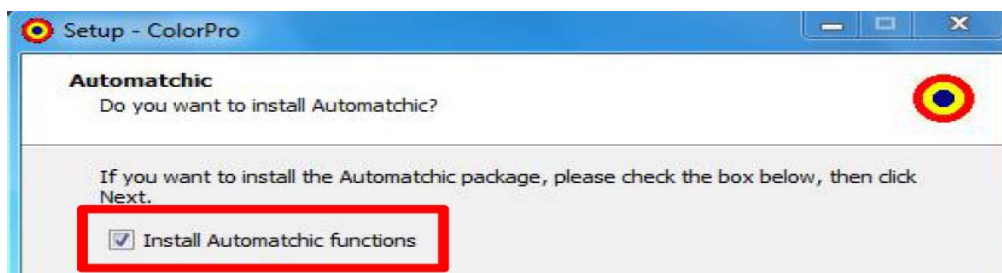

Wanda color information and formula retrieval is also now available through MIXIT Cloud, a real-time color web application designed to work seamlessly on smartphones, tablets and PCs; available at www.MIXITcloud.com. It offers a quick and easy solution for bodyshops to find the color they need; using a keyword search, in any language.

ColorPro updates are no longer available via a USB; they must be downloaded from the Wanda Distributor Port or the AkzoNobel Customer Service Portal.

Once downloaded extract files to your computer and double click on ColorProSetup.exe and follow the prompts to install as normal.
